**ABSTRACT OF THE DISCLOSURE**

~~The invention relates to a~~ A sealing system for the interspace in the transition region between two well pipes of different diameters, and a mounting tool for producing the sealing connection is disclosed. The mounting tool (1) ~~with the sealing system suspended on it~~ is lowered via a drilling string through ~~the a larger diameter pipe of larger diameter~~ and, with ~~the a~~ sealing system, is placed on a holding docket on the upper end of ~~the a lower, smaller diameter, pipe of smaller diameter~~. ~~By means of a~~ A rotation exerted on the mounting tool via the drilling string; causes the sealing system is to be fixed to the lower pipe. Via the drilling string, the mounting tool is pressed vertically downwards against a sealing ring of the sealing system which, as a result, bears in a sealing manner against the inner wall of the upper pipe of larger diameter. This sealing position is fixed by rotating the mounting tool in one direction; and by rotating the mounting tool in the other direction; ~~the mounting tool is released from the sealing system and pulled upwards again via the drilling string.~~
